As some gaming laptops are tested for their 3DMark 11 performance, its nice that this software allows me to compare their performance against my gaming desktop.. Good benchmark software for anyone overclocking 7/10. It functions as a

benchmark.. good benchmark as expected. i like to run the "same old" benchmark as long as possible. i this case i have comparables i can count on. always having the latest benchmark makes absolutely no sense if you just want to test your own pc after hardware upgrades.. Fix the crashing.. Works Very well used it lots. Fix the crashing.. This is a benchmarking program. It should be pretty self-explainatory. In fact, I don't even know why I'm writing a review for this. If you need this, you'll probably know. If you're not sure, then you probably don't need it.. Best pc game ever, graphics and gameplay are fantastic! New word in game industry! Highly recommended!

Possible UI and resolution fix : Hello everyone! I heard a common problem are resolutions different from 1080p monitors. I tried to implement a fix / patch for this problem, and that has been released now.. Cuit Free to play! : Hello everyone! I have decided to make Cuit Free-To-Play now, as I sadly have no time left supporting this application anymore (for quite a while already, actually). Hope some of you still find joy in solving the puzzles. I admit that the UI is to be improved (to say the least), but yeah. Maybe one day I'll have the time to get back to it or make a sequel with more of a budget (or rather any budget at all).. Update 1.12: Copy & Paste / Selection Mode and UI Improvements : Update 1.12: New features: Selection mode in editor Copy and Paste (Duplicate) selections Delete selections New nano-splitter segment allowing for more flexible cable placement Updated: UI improvements (Will be improved more over time - I noticed the problems and suggestions from the community concerning the UI) Tool-Tip improvements: The tool-tips while hovering a gate have been improved upon community feedback Bugfixes: Cable placement in editor now works in both ways. Once triggering a bomb (and turning it off again) in build mode won't blow up the level any more when turning the build mode off.
